

# Manage crisis calls in real time

MNF Enterprise Pulse™ is an advanced call flow management tool designed for inbound contact centres that experience volatile traffic peaks.

With Pulse, you have direct control over your inbound call flows, and can change call routing in real time. When call volumes surge, you can respond with speed and precision.

### Real-time management

Execute advanced overflow rules with one click. In seconds, you can overflow calls to an IVR menu, message or alternative contact centre. Record a new message for immediate use or use pre-recorded audio.

### Location-based call flows

Customise call flows based on the caller's location and time of day. This is ideal when managing calls from an after-hours crisis or a localised outage.

## How it works

Update your inbound call flows in seconds. No technical knowledge is needed. Pulse is purpose built for multi-regional contact centres used by utilities and government.
